NEEDHEE
World of Home Automation

Go smart with us

Since 1995, Needhee Automation Private Limited (NAPL) has been at the forefront of the Indian electronics manufacturing industry. Leveraging nearly three decades of expertise in electronics circuits, we have expanded our vision to redefine modern living through a comprehensive suite of Smart Home Automation solutions.

We specialize in the design and manufacture of high-performance, durable switching solutions that integrate seamlessly into the modern household. Engineered for the IoT era, our smart switches allow users to control lighting, fans, and heavy appliances from anywhere in the world via a dedicated mobile app. We combine the precision of industrial-grade engineering with the simplicity required for home use, making us the preferred partner for high-quality, safe, and innovative smart switches in India.

As a prominent electronic circuit manufacturer in India, we are committed to continuous research and development. Our mission is to provide customers with high-performance, safe, and durable automation solutions that define the future of smart living.

Smart Home Solutions

Elevate your home with the next generation of smart automation. Our innovative smart switches leverage Wi-Fi, Bluetooth, and ZigBee technologies, allowing you to manage lighting, appliances, and other devices remotely via smartphone apps or voice integration with Alexa and Google Assistant. Unlike traditional wired switches, our solution offers the unparalleled convenience of custom scheduling and automation. Our switches features advanced capacitive touch technology, ensuring a manual interface where a light human touch is all that is required for seamless operation.

Wi-Fi+Bluetooth Smart Switches

These switches are based on Wi-Fi and Bluetooth combo solutions, offering seamless integration and versatile connectivity for fast, dependable wireless communication. You can control your devices from anywhere with internet access via a mobile app. Furthermore, in the absence of an internet connection, these devices can still communicate with the app using Bluetooth, provided they are within range.

Bluetooth Mesh (BTM) Smart Switches

Bluetooth Mesh Smart Switches utilize Bluetooth modules that follow the Bluetooth Mesh protocol. Bluetooth Mesh is an emerging technology that effectively addresses the limitations of classic Bluetooth, such as restricted connection distances and the maximum number of connected devices. By creating large-scale "many-to-many" networks, this technology enables the seamless control of extensive smart device ecosystems. These devices can be managed remotely via smartphone apps through a Smart Gateway. However, a gateway is not required for local communication; if the smartphone is within Bluetooth range, the app can communicate directly with the devices.

ZigBee Mesh Smart Switches

ZigBee Mesh Smart Switches establish internet connectivity via a gateway (or hub), enabling remote access to devices within the ZigBee network. While the switch operates on the ZigBee protocol, the Smart Gateway typically connects to the internet through Wi-Fi or Ethernet. By utilizing a mesh network topology, each node in the network can communicate with others and relay data. This decentralized structure significantly extends the network's range and enhances overall reliability.

Retrofit Smart Modules

Retrofit Smart Modules allow you to transform traditional home systems into a smart home with the convenience of automation. These modules upgrade your living space without the need for extensive rewiring or replacing your existing switches. By connecting directly to your Wi-Fi network, these devices enable remote control via mobile apps or voice commands through Alexa and Google Assistant, all while ensuring your original wall switches remain fully functional.

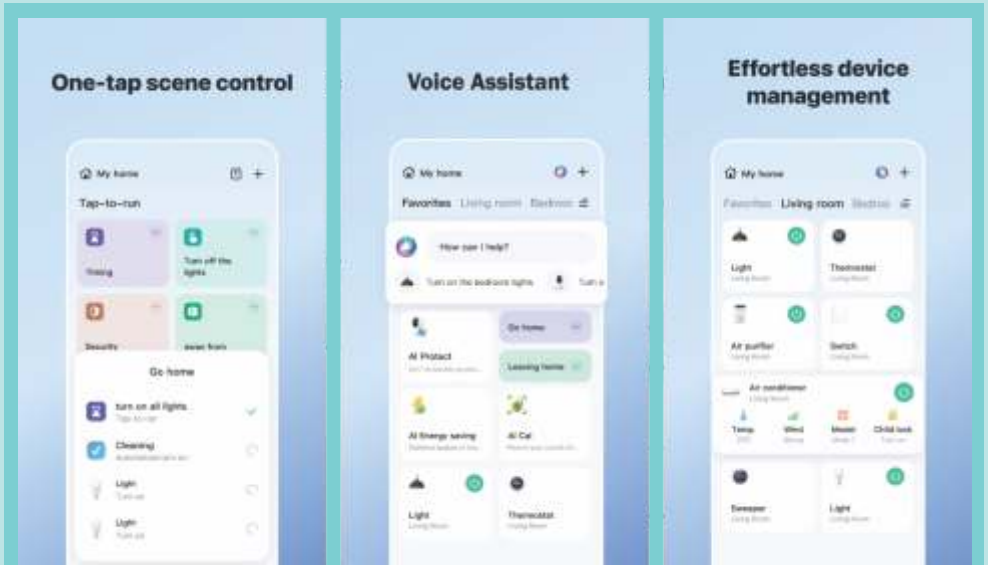

Smart Gateway

A smart gateway serves as the central hub for a modern smart home, acting as a critical bridge between various smart devices and the user's smartphone. By supporting Wi-Fi, Bluetooth, and ZigBee protocols, the gateway ensures seamless interoperability across different hardware standards. The gateway leverages Wi-Fi to maintain a constant uplink between the cloud and the mobile application, enabling real-time synchronization. Users can view and remotely control connected ZigBee and Bluetooth Mesh devices directly through the app, regardless of their physical location.

Smart Life App (All-in-one Device Management App)

SmartLife is a comprehensive platform designed for the intuitive management of smart devices. This free, user-friendly application facilitates seamless interconnectivity, providing you with enhanced comfort and peace of mind. By integrating your hardware into the SmartLife ecosystem, you can elevate your living experience through the following advantages:

- Effortlessly connect and manage a wide range of smart devices, ensuring they function exactly as you desire—anytime, anywhere.
- Relax while the app handles home automation triggered by external factors such as location, time schedules, local weather conditions, and real-time device status.
- Control and monitor multiple devices across different categories through a single, streamlined interface.
- Configure voice command controls via popular assistants for hands-free operation.
- Securely share device access with family members, allowing everyone to manage the home environment.
